

# Common lizard

- Common lizards are **reptiles** which means they have **scaly skin**
- They can **lose their tail** if scared and it carries on wiggling for a bit. This helps them escape from predators. The tail regrows.
- They like to **sunbath** on logs
- They **eat small insects and spiders**
- Young common lizards are **dark in colour**
- Adults are usually **brown with dark and light markings**
- Males have an **orange belly**
- Females give birth to **live young**

**Green Pathways** supports young people with extra difficulties in their lives to improve green spaces for wildlife and people, and learn about and enjoy the environment. The project works in Peterborough, Fenland and Northamptonshire.
